

VIDA - analogue CCTV over plastic optical fibre

CCTV WITHOUT NOISE & EMI

The VIDA system is installed like a copper cable
(a cable for each camera). . .

with the same simplicity and the same costs, but with the plastic fibre's unique quality to eliminate all of the problems of distortion, isolation and lightning, which come with a coaxial cable and UTP.

Why choose CCTV over Plastic Optical Fibre?

- > it's easier to install than CAT5 cable
- > it's easier to crimp than BNC
- > cost 1/3 of a traditional fibre cable
- > it will solve noise and ground loops
- > 2mm diameter for easier fitting
- > extended range
- > can be run alongside HV cables
- > standard, armoured & duct grade cables available

Design out electromagnetic interference with LiteWIRE - cost effective POF for analogue CCTV

- **Optimises video quality over long runs, and avoids ground loops**
- **CCTV equipment is isolated from lightning**
- **Video only or with RS485 for controlling speed domes**
- **Operating distances 300 - 600m options**
- **1U rack-mount option for 4, 8 or 12 inputs**
- **Devices supplied in IP55 cases
- optional 12v DC power supplies**
- **Install adjacent HV cables, fully compliant with regulations; plastic fibre is an insulator**
